Yihua environmental protection
 focus on industry
 from science and technology
 thriving in quality

Qingdao Yihua Environmental Protection Co., Ltd

QINGDAO YIHUA ENVIRONMENTAL PROTECTION CO., LTD

Qingdao Yihua Environmental Protection Co., Ltd. is located in Qingdao, Shandong Province, China, specializing in the purification and improvement of sewage and atmospheric environment engineering, the company has an excellent professional technology research and development team, equipment manufacturing and construction personnel team. Adoption of 6S management mode, the company has obtained ISO9001 certification, effectively protect the company's stable production and manufacturing capacity. Since its establishment, the company has established strategic cooperative relations with the United States, Germany, Japan, South Korea and China Taiwan and other international well-known enterprises, and with a number of well-known domestic universities, scientific research institutions and other scientific research and development work, the company has a comprehensive air environment governance. Sewage treatment project undertaking ability, can provide users with reasonable system solutions. Yihua environmental protection closely follow the environmental protection requirements, actively layout the development strategy, create the innovation ability, has now developed into and set research and development, design, manufacturing, installation and debugging, sales, operation and maintenance, after-sales as one of the water treatment, waste gas purification treatment integrated service providers. Main products: Lamella Clarifier, domestic sewage treatment equipment, CPI, DAF air flotation, air flotation precipitation integrated machine, incinerator, all kinds of dust collector, shot blasting machine, etc., support O E M , Looking forward to cooperation and technical exchanges with you, the door of the company is open for you, welcome your visit.

- **Corporate Philosophy:** Emphasize innovation, abide by rules, emphasize performance and love learning
- **Purpose of the enterprise:** Continue to improve people's living environment
- **The business goal:** It contributes to the development of circular economy in China. To become a leading domestic environmental protection enterprise group with good image, good management and good performance.
- **Quality policy:** Full participation, customer satisfaction, continuous improvement, pursuit of excellence

Greening the world with science and technology saving energy to accumulate wealth

Company qualification

QINGDAO YIHUA ENVIRONMENTAL PROTECTION CO., LTD

Lamella clarifier

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Lammera sedimentation tank features:

- Practical and beautiful: unique appearance, beautiful and generous.
- Uniform cloth water: such as resistance cloth water, cloth water uniform, reduce disturbance.
- No hydraulic dead Angle: good chimeric condition between inclined plate device and box body
- Improve the precipitation efficiency: than the traditional packing precipitation area is larger.
- Water stability: uniform water distribution + bigger buffer = uniform water outlet.
- Small footprint, large handling capacity.

Applicable occasions:

Lammera sedimentation tank is a technologically advanced and reliable sedimentation equipment, which is widely used in the purification and treatment of industrial wastewater, domestic sewage, slaughtering wastewater, non-ferrous metal processing wastewater, stone sewage, mine sewage, biochemical water and all kinds of high suspended solids wastewater. Also suitable for drinking water purification engineering, widely used.

Wide application range:

Meticulous and rigorous, excellent materials, every detail is meticulous

STABLE PRODUCT AND RELIABLE QUALITY

Air-flotation precipitation integrated machine

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Advantages of air flotation precipitation integrated machine:

- The surface load can be up to $12\text{m}^3/(\text{m}^2\cdot\text{h})$, residence time in water 10-20min, small footprint, large capacity.
- With pre-aeration, decolorization, reduce COD and other functions, the effluent and scum contain a certain amount of oxygen, is conducive to subsequent treatment or reuse, sludge is not easy to decay.
- The scum moisture content is low, generally below 96%, and the volume of sludge is 2-10 times less than that of ordinary precipitation method, which simplifies the sludge disposal and saves the cost.
- High suspension removal rate, suitable for high turbidity of raw water containing part of the impurities with large density and not easy to coagulate.

The working principle of:

Air floatation is the use of tiny bubbles as a carrier, adhere to the impurity particles in water, so that its density is less than water, and then the particles are carried up to the water surface and water away from the particles.

To adapt to the object:

- The particle size of solid particles in sewage is very fine, and the density of the particles themselves and the flocs formed is close to or lower than that of water, so it is difficult to use precipitation method to achieve solid-liquid separation of all kinds of water.
- In terms of water supply, the purification of high algal water source, low temperature and low turbidity water source, polluted water source and salt water of industrial raw materials can be used.
- liquid-liquid separation: separation and recovery of oil, organic solvent droplets, surface active agents and various metal ions from sewage.
- The requirement of higher specific gravity precipitation hydraulic load and solid load, or land is limited occasions.

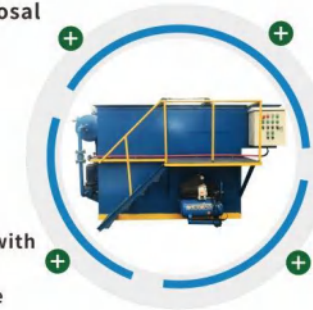

STABLE PRODUCT AND RELIABLE QUALITY

Simplify sludge disposal and save costs

Small footprint and large processing capacity

Suitable for impurities with high density and not easy to coagulate

High suspension removal rate

Application field:

- Paper white water pulp recycling and water reuse
- Removal of various heavy metal ions
- Separation of oil refining wastewater and oil pollution
- Tannery wastewater removal
- Chroma and impurity removal of printing and dyeing wastewater

Automatic dosing machine

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Equipment introduction:

Automatic dosing device, mainly solution box, mixer, metering pump, Y-type filter, safety valve, back pressure valve, check valve, pulse damper, water level gauge, pressure gauge, control cabinet, installation platform, etc., is integrated and installed on a base. Users only need to add the prefab dosing devices on medicine, between the dosing pipe joint good start running just by turning on the power supply, automatic detection of fluid in the process of running of ph intelligent judgment and the corresponding solution, the factory set of device, can greatly reduce the design and site construction work, the basic realizing unattended, It provides a reliable guarantee for the quality, safety and operation of the whole machine.

Product details:

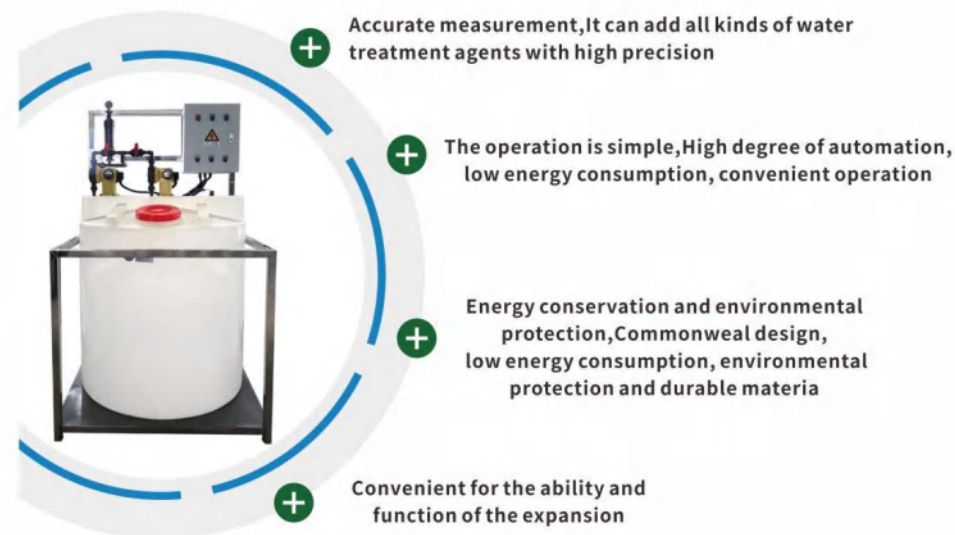

Characteristics of the equipment:

- The equipment adopts corrosion resistant materials, long service life, stable performance.
- Automatic control, boot the equipment can automatically run, quantitative dosage, when the liquid level is low, automatically stop, to avoid invalid operation of the equipment.
- Highly integrated, save space.

Applicable occasions:

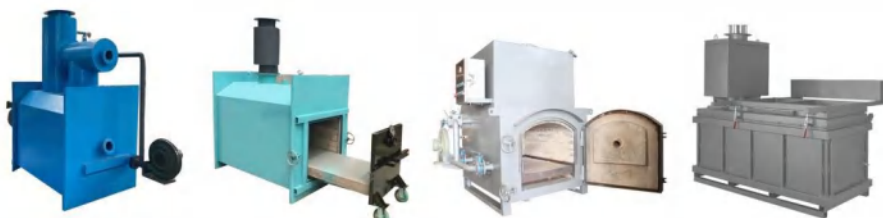

- Acid, alkali conditions under the chemical agent adding.
- Addition of chemicals in sewage treatment projects
- The chemical industry quantitative dosage of chemicals

MULTIPLE USES TO SOLVE SEWAGE PROBLEMS

Incinerator

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Equipment introduction:

Incinerator is a kind of high temperature incineration of waste gas, waste liquid, solid waste object fuel, medical waste, life waste, animal carcass, etc., to achieve quantitative reduction or reduction of a kind of environmental protection equipment, at the same time to achieve the use of part of the heat energy of the incineration medium a product. It is divided into fixed incinerator and mobile incinerator

Product advantages:

- A wide range of waste treatment can deal with industrial waste, household waste, hospital waste, waste rubber tires, etc.
- High combustion thermal efficiency of normal combustion thermal efficiency of more than 80%, even a large amount of water in the domestic garbage, combustion thermal efficiency is more than 70%.
- Due to the use of many special designs and high level of automation control, there are fewer operation personnel (two people per furnace, including the slag removal personnel) and less maintenance work.
- The grate has a self-cleaning function under the purge of compressed air

- High reliability After nearly 20 years of operation, the failure rate of the incinerator is very low, the annual operation of more than 8000 hours, the general utilization rate can reach more than 95%.
- High level of emission control Due to the use of secondary flue gas recombustion and advanced flue gas treatment equipment, the flue gas has been fully treated. After long-term testing, the flue gas emissions of CO content 1-10 PPM, HC content 2-3 PPM, NOx content 35 PPM, fully in line with the European and American emission standards. Flue gas in two, three combustion chamber combustion temperature of 1000°C, and residence time of more than 2 seconds, can make the basic decomposition of dioxin, the content of dioxin in flue gas is 0.04ng /m³, far lower than the European and American standard 0.1ng /m³.

INCINERATION · AND ONE-STOP EXPERIENCE

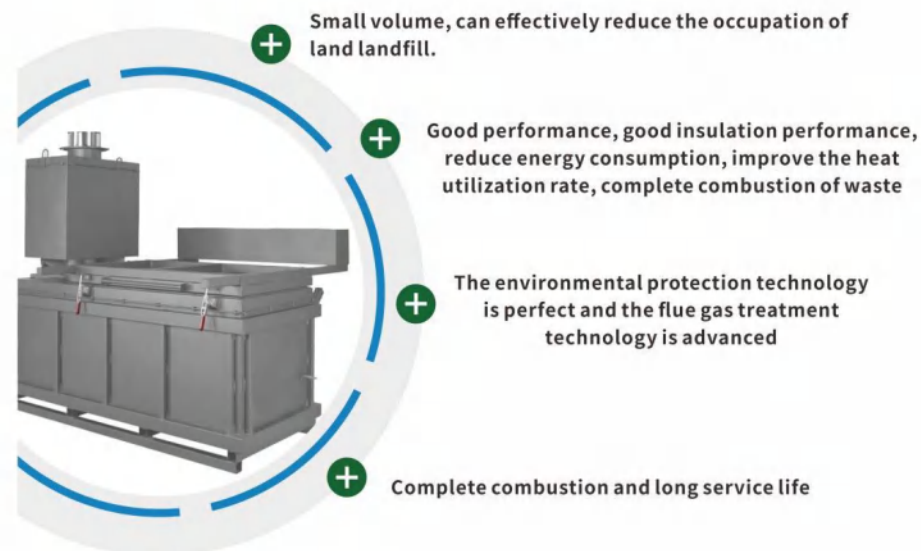

Plate and frame filter press

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Equipment introduction:

Plate and frame filter press is a kind of common suspension solid and liquid two phase separation equipment. Plate and frame type filter press is mainly composed of many filter plates and filter frames arranged at intervals. The plates and frames are made into squares, and the corners are all opened with small holes. It is to rely on the pressing device to press the filter plate, and then the suspension is pressed into the filter chamber with a pump, through the filter cloth to achieve the purpose of separating solid particles and liquid particles. The control mode is divided into manual control and electric control.

The working principle of:

The plate and frame filter press consists of a group of filter chambers consisting of alternately arranged filter plates and filter frames. The surface of the filter plate is grooved, and its protruding parts are used to support the filter cloth. The filter frame and the filter plate are provided with through holes at the corners. Both sides of the plate and frame are provided with a handle on the beam, and the plate is pressed by the pressing device. The suspension hydraulic pressure is pumped into the filter chamber by the feed pump, and the filter residue is formed on the press cloth until the filter chamber is filled. The filtrate passes through the filter cloth and flows along the grooves of the filter plate to the edge and corner channels of the plate frame and is discharged centrally. After filtering, clean water washing filter residue can be passed through. After washing, compressed air is sometimes added to remove the remaining washing liquid. Then open the filter press to remove the filter residue, clean the filter cloth, re-press the plate frame, and start the next working cycle.

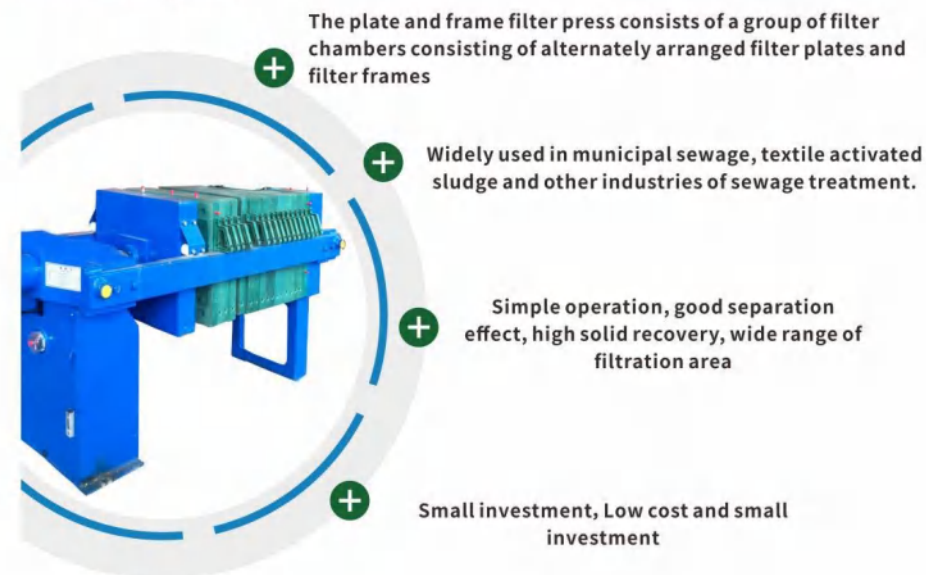

Product advantages:

- Simple structure, easy operation, less failure, less auxiliary equipment needed.
- Good separation effect, strong adaptability to the material, not only can separate difficult to filter the low concentration of suspension and colloidal suspension, but also can separate the material liquid viscosity and close to the saturation state of suspension.
- The filter area has a wide selection range, which can be selected between 3 ~ 1250m².
- High solid recovery rate and good filtrate clarification.
- Low cost and small investment.

Scope of Application:

Widely used in urban sewage, textile printing and dyeing, electroplating, papermaking, leather, brewing, food processing, coal washing, petrochemical industry, calcium carbide slag, starch slag, wine residue, textile activated sludge and other industries of sewage treatment.

STABLE PRODUCT AND RELIABLE QUALITY

Folded screw sludge dehydrator

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Equipment introduction:

The folded screw sludge dehydrator manufactured by the company is the use of the screw extrusion principle, through the screw diameter and pitch changes produced by the strong extrusion pressure, as well as the small gap between the swimming ring and the fixed ring, to achieve the sludge extrusion dehydration of a new type of solid-liquid separation equipment.

Product advantages:

- Low operation cost: less than 40% of the operation cost of belt filter press, less than 20% of the operation cost of centrifugal dehydrator.
- Power saving: less than 5% of the centrifuge's electricity.
- Water saving: use less than 0.1% of the belt filter press.
- Save medicine: save medicine by 60% on average.
- Small volume: dewatering room investment saving more than 60%.
- The Nemesis of oily and fibrous sludge.

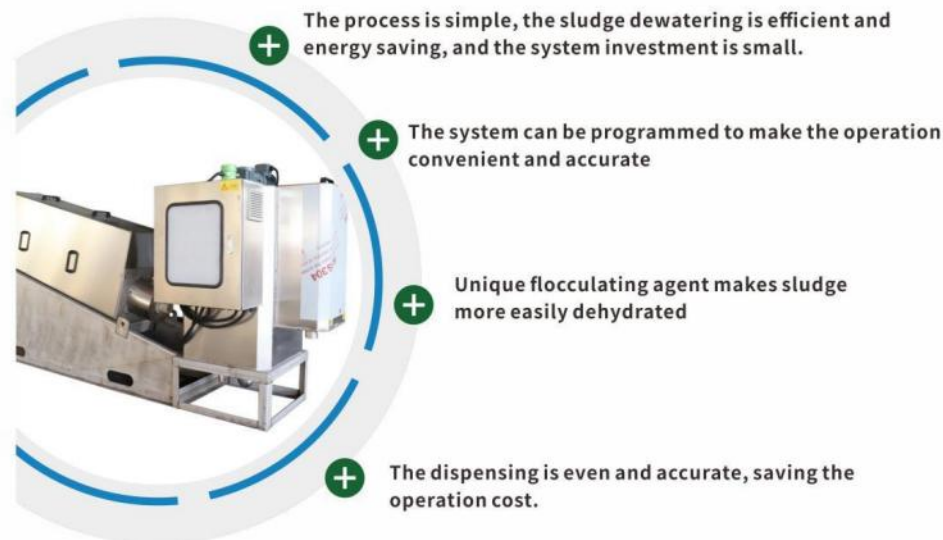

The working principle of:

The stack screw sludge dehydrator integrates automatic control cabinet, flocculation and conditioning tank, sludge concentration and dehydration body and liquid collection tank into one, which can realize efficient flocculation under the condition of automatic operation, and continuously complete the sludge concentration and pressing and dehydration work, and eventually return or discharge the collected filtrate.

Scope of Application:

Application: suitable for municipal sewage, petroleum refining, brewing leather, printing and dyeing paper, coal mineral processing, biochemical pharmaceutical, iron and steel pickling, food sugar, etc.

STABLE PRODUCT AND RELIABLE QUALITY

Catalytic combustion plant

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

The working principle of:

The principle of activated carbon adsorption device to treat waste gas is that under a certain temperature and pressure, when activated carbon and waste gas contact, waste gas adsorption in the pores of activated carbon. When the gas and solid phase begin to contact, the adsorption of ammonia and hydrogen sulfide in the exhaust gas is the main process. In the many micropores of the activated carbon, it is divided into three kinds of pores, large, small and medium-sized. Only the micropores are the main force of adsorption. The crystal has micropores (radius less than 20 [angstroms] = 10-10 m), transition pores (radius 20 ~ 1000), and macropores (radius 1000 ~ 100000), which give it a large inner surface with a specific surface area of 500 ~ 1700 m² / g. This determines that activated carbon has good adsorption, can adsorb the metal ions in waste water and waste gas, harmful gases, organic pollutants, pigments and so on. Industrial application of activated carbon also requires high mechanical strength, good wear resistance, small wind resistance. Its structure is stable and the energy required for adsorption is small, which is conducive to regeneration. Activated carbon is used for oil, beverage, food, drinking water decolorization, deodorization, gas separation, solvent recovery and air conditioning, as a catalyst carrier and gas mask adsorbent. With the extension of time, the concentration of adsorbate in the fine pore of activated carbon increases continuously, and the adsorption speed will slow down continuously until the activated carbon reaches the saturation state. At this point, the adsorption velocity and desorption velocity reach dynamic equilibrium, and the transfer between gas and solid phase is equal. Activated carbon at this time needs to be desorbed desorption regeneration or replacement.

Product advantages:

- Protection equipment, Equipped with temperature probe and supplementary cooling valve to prolong service life and prevent accidents.
- Good adsorption power, it can adsorb metal ions, harmful gases, organic pollutants and pigments in waste water and waste gas.
- Industrial application, High mechanical strength, good wear resistance, low wind resistance.

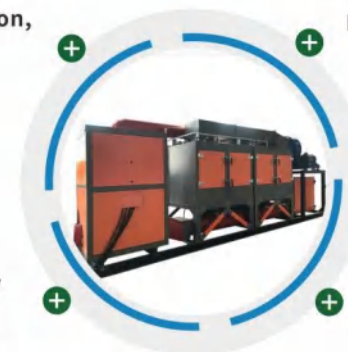

Work performance:

Activated carbon adsorption box is mainly composed of box, carbon box, activated carbon and so on. The box is made of square tube skeleton, and the outer wall of the skeleton is made of amorphous galvanized sheet to seal the box body. The box body has a solid structure and is sealed well (sealed with glass glue), which is not easy to produce deformation and air leakage. Activated carbon adsorption bed is equipped with activated carbon layer and air distribution device to concentrate and purify organic gas. It is the main component and core process of the first main cycle of the whole device. Activated carbon brick loading. Waste gas into the box by filling on both sides of the activated carbon adsorption purification, in order to reduce the adsorption velocity of the adsorption box, improve the purification efficiency.

Heat recovery plant

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

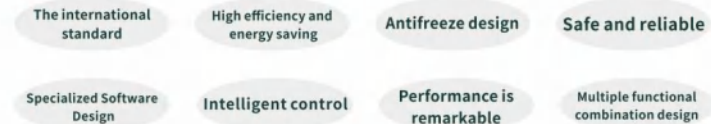

Product design concept:

Purification type combined air conditioning unit is the most important equipment to control the key indicators of air temperature, humidity, cleanliness, differential pressure, noise and airflow speed in the clean area. Its safe and reliable performance is one of the most critical factors of product design concept. The effective maintenance of air indicators in clean areas needs to consume a lot of energy such as electricity and heat. By optimizing heat transfer and reducing fluid resistance, the energy consumption of the purified combined air conditioning unit is effectively reduced. Intelligent control has become the basic requirements of clean air conditioning system, in the design of the product should not only consider the control of the product itself, but also to take into account the control and data storage of the whole purification air conditioning system.

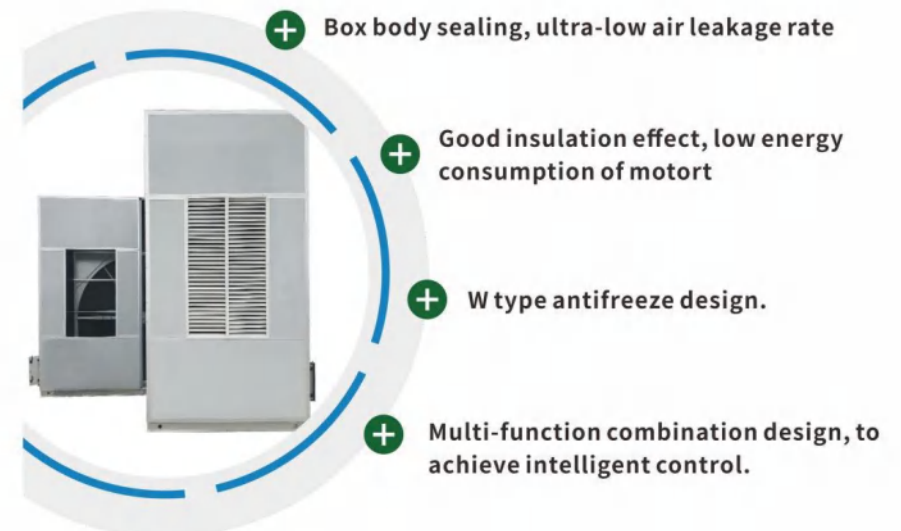

The unit features:

- Excellent performance of patent escort
The patented box structure design, combined with the uninterrupted flexible sealing technology, ensures the excellent sealing performance of the box. Specialized design to ensure ultra-low air leakage rate, air leakage rate higher than the national standard requirements. Complete cold bridge design, good heat preservation effect.

- High efficiency and energy saving
The use of corrugated or slotted fin, optimized chip spacing design, the heat exchange effect is higher than the same industry level increase about 15%, indirectly reduce the motor energy consumption.
- Specialized Software Design
The design Software with independent intellectual property rights can avoid subjective design differences, reduce the risk of errors, improve the design efficiency, and provide detailed unit parameters and drawings to the project users.
- Multiple functional combination design, according to different user needs, according to a variety of working conditions for the design, for different parameter requirements for users to choose

STABLE PRODUCT AND RELIABLE QUALITY

Domestic sewage treatment tank

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Equipment introduction:

The integrated domestic sewage treatment device is an integrated domestic sewage treatment device developed on the basis of summarizing the operating experience of domestic and foreign domestic sewage treatment devices by adopting the international advanced biological treatment technology. It sets the removal of BOD5, COD, NH3-N, nitrification and denitrification functions in one body, has the advantages of stable effluent water quality, small investment, high degree of automation, easy maintenance and operation. The integrated domestic sewage treatment equipment can be set up into buried type, and the ground can be planted with flowers and grass or hardened, without affecting the surrounding environment.

Equipment advantages:

- Microbial flora has high biological activity, large amount of microorganism per unit volume and strong processing ability.
- The growth environment of microflora is relatively stable, which improves the stability of system operation performance and enhances the ability to resist impact.
- Low energy consumption, saving construction and operation costs.
- Small surplus sludge production, reduce the construction of sludge disposal facilities.

- It can be applied to different types of sewage construction or transformation without secondary pollution. Each functional area of the platform is modular, which can be designed and configured according to different water quality and drainage requirements, or can be matched with the original treatment facilities for reasonable arrangement.

Scope of application:

Hotels, restaurants, sanatoriums and hospitals

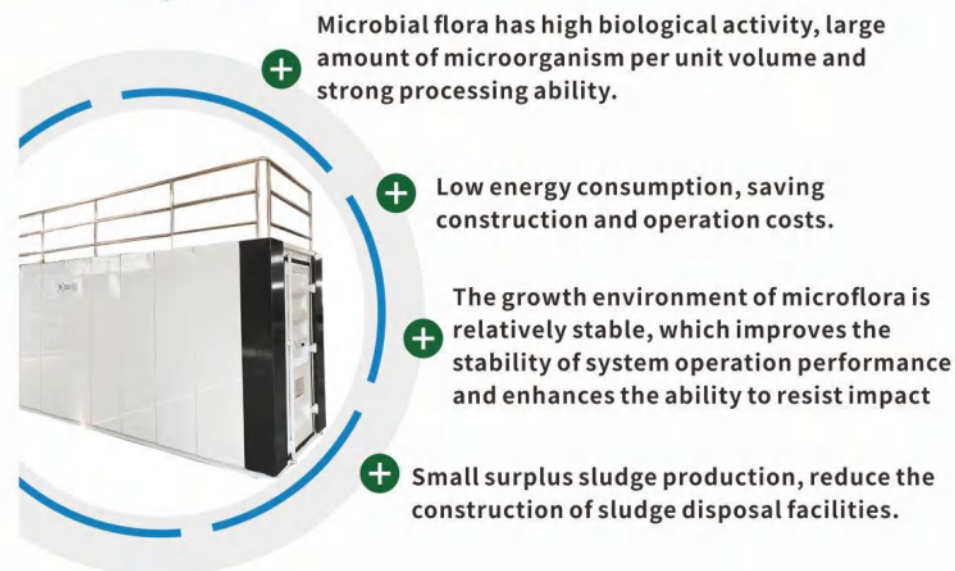

A residential quarter, village, market town

Station, airport, harbour dock, ship

Factories, mines, troops, tourist spots, scenic spots

A variety of industrial organic wastewater similar to domestic sewage

STABLE PRODUCT AND RELIABLE QUALITY

Ultraviolet disinfection

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Product advantages:

- Good sterilization effect, Ultraviolet ray penetration rate above 99%, sterilization effect is good.
- Security is strong Small current pressure, strong safety, easy maintenance.
- Wide application range, All kinds of sewage, surface water, groundwater, pure water, sea water and other water quality disinfection.

Scope of application:

Sewage disinfection: municipal sewage, hospital sewage, industrial sewage.

Disinfect water supply, tap water, surface water (well water, river water, lake water, etc.).

Suitable for aquaculture water and aquarium water disinfection.

Suitable for circulating water disinfection, swimming pool water, landscape water, industrial circulating cooling water.

Suitable for agricultural irrigation water, ship water disinfection field.

Suitable for disinfection of pure water, food and beverage, electronics, medicine, cosmetics and other process water quality disinfection.

WIDE RANGE OF APPLICATIONS

Meticulous and rigorous, excellent materials, every detail is meticulous

STABLE PRODUCT AND RELIABLE QUALITY

- + The sterilization rate is as high as 99%.
- + Ultraviolet disinfection equipment is widely used.
- + Clear operation interface, easy to operate.
- + Ensure product stability, reliability and safety.

Automatic dosing device

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

Equipment introduction:

Automatic dosing device, mainly solution box, mixer, metering pump, Y-type filter, safety valve, back pressure valve, check valve, pulse damper, water level gauge, pressure gauge, control cabinet, installation platform, etc., is integrated and installed on a base. Users only need to add the prefab dosing devices on medicine, between the dosing pipe joint good start running just by turning on the power supply, automatic detection of fluid in the process of running of ph intelligent judgment and the corresponding solution, the factory set of device, can greatly reduce the design and site construction work, the basic realizing unattended, It provides a reliable guarantee for the quality, safety and operation of the whole machine.

Product details:

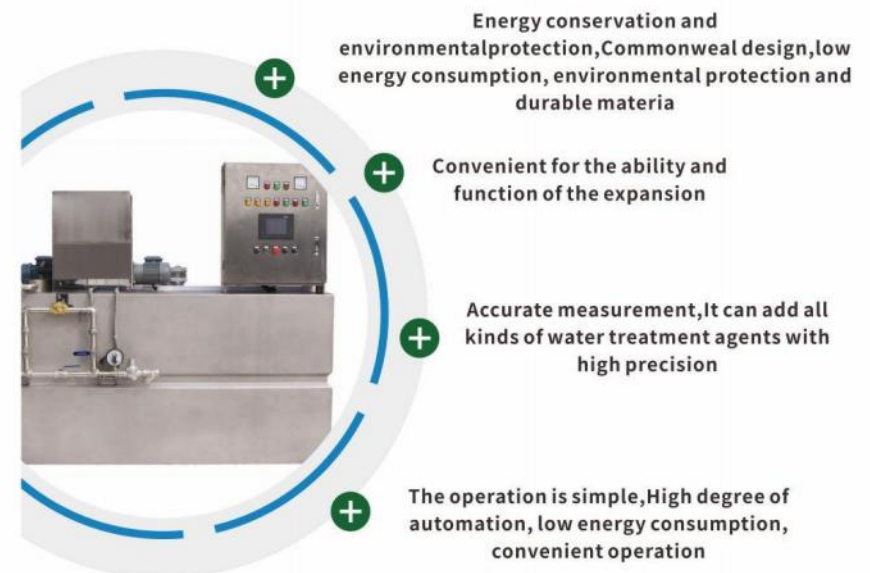

The equipment is made of corrosion-resistant materials with long service life and stable performance.

Automatic control, starting the equipment can automatically run, quantitative dosage, when the liquid level is low, automatically stop, to avoid the invalid operation of the equipment.

Applicable occasions:

- Acid, alkali conditions under the chemical agent adding.
- Addition of chemicals in sewage treatment projects
- The chemical industry quantitative dosage of chemicals

MULTIPLE USES TO SOLVE SEWAGE PROBLEMS

The filter

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

The working principle of:

Quartz sand filters utilize quartz sand as the filtering medium. The filter material has the remarkable advantages of high strength, long life, large processing flow and stable and reliable water quality. The function of quartz sand is mainly to remove suspended solids, colloid, silt and rust in water. The upper part of the activated carbon filter is provided with a water inlet device, and the lower part is provided with a drainage device. When running, the water enters through the upper part, flows through the activated carbon filter layer and flows out from the bottom. Using the surface of the activated carbon has a large amount of functional groups such as hydroxyl, the various properties of the material can be chemical adsorption, eliminate peculiar smell, organic matter in water, colloid, iron and residual chlorine, etc., at the same time reduces the water turbidity, chromaticity, make the water clear and transparent, to reduce the follow-up system (reverse osmosis, ultrafiltration, ion exchanger) pollution.

Product details:

Industrial water, domestic water and municipal water supply systems that meet the drinking water quality standards; The removal of suspended solids and solids in industrial sewage; And used in the swimming pool circulation treatment system, cooling circulating water purification system, etc. Widely used in food, medicine, electronics, chemical, industrial waste water and other industries.

EQUIPMENT INSTALLATION PROCESS

EQUIPMENT INSTALLATION PROCESS

EQUIPMENT INSTALLATION PROCESS

STABLE PRODUCT AND RELIABLE QUALITY

Unique multi-filter chamber structure, can realize online backwash.

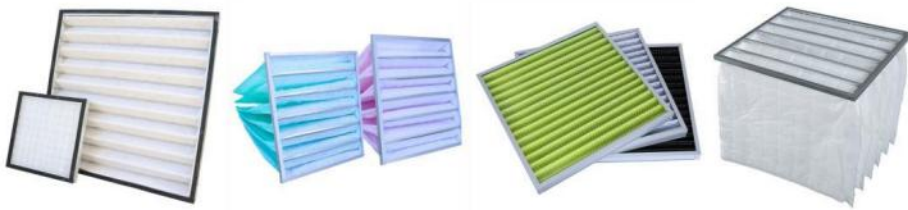

According to the system water pressure, the tank material can choose to use carbon steel, FRP.

Both the upper special effect filter and the lower efficient adsorption and other functions.

It has excellent performance for peculiar smell, organic matter, colloid, iron and residual chlorine in water.

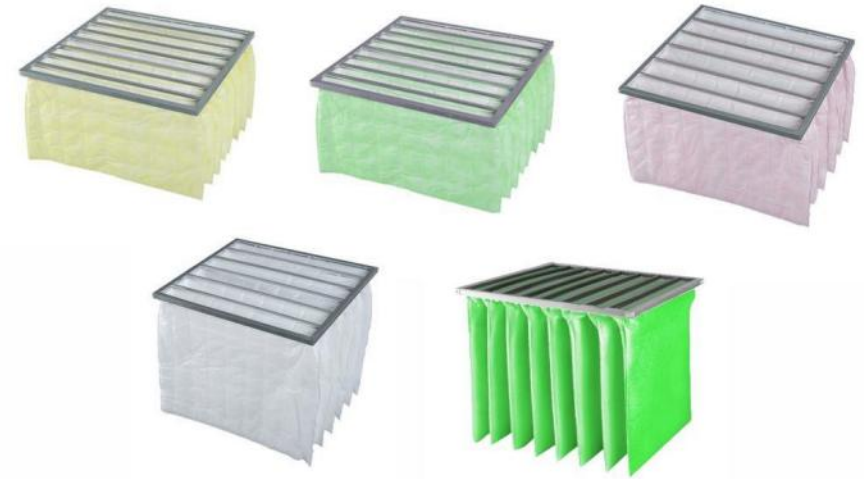

High efficiency plate frame filter

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

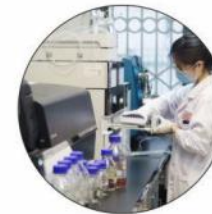

product feature :

- 1.Good material**
Filter material for high - quality polyester synthetic fiber (coarse filter cotton).
- 2.A variety of frame**
Outer frame for metal outer frame, aluminum alloy outer frame, stainless steel outer frame, durable and not easy to deformation.
- 3.Resistance to wet heat resistance**
Humidity resistance up to 100%; The heat resistance of 80 °C.
- 4.Performance and efficient**
The use of high-end filter material small volume, large filtration area, low resistance and high efficiency.
- 5.Tight sealing**
Selected polyester gel material edge, good sealing effect, not easy to wear more durable.
- 6.Not easy to dust**
High strength, good toughness, not easy to dust, easy installation, labor saving.

Hook type shot blasting machine

All members of Yihua Environmental Protection Company always adhere to the spirit of "Innovation", "Integrity" and "Service" to provide professional services of environmental protection engineering for customers, in order to create and meet the diversified requirements of customers, and strive to respect the natural environment and effectively reduce the pollution and impact on the environment.

The working principle of:

Hook type shot blasting cleaning machine has large shot blasting, high cleaning efficiency, large effective room space, compact structure, and adopts the form of no pit, no special requirements on the shape structure of the cleaning workpiece, can be multi-purpose, this series of products are widely used in machinery manufacturing and casting industry. Our company can design and manufacture for users according to the requirements of cleaning workpiece.

product feature:

1. Hook shot blasting machine has the characteristics of large shot blasting, high cleaning efficiency, large effective space and compact structure.
2. No pit shape, no special requirements on the shape and structure of the cleaning workpiece, can be used in one machine.
3. This machine has no pit double hook rail change, compact structure, high production efficiency.
4. This shot blasting machine has high production efficiency and large flexible span, so it is an ideal cleaning and strengthening equipment. Construction, chemical, electrical, machine tools and other industries.
5. Just load the workpiece to be processed on the machine, press the start button, complete the whole cleaning process in a very short time, remove all dust and residual particles on the workpiece.
6. Remove the rust spot, welding slag and oxide skin on the surface of the metal surface to obtain a certain degree of uniform gloss, to remove stress, improve the surface gloss quality and anti-corrosion properties of steel.
